

EltaMD[®] Moisturizer

Product Information

Intense, long-lasting moisturizer

- Melts on contact and retains 90% of skin moisture for at least 12 hours
- Soothes irritation, redness and flaking
- Helps relieve skin problems associated with diabetes, renal disease and medications such as tretinoin

EltaMD[®] Moisturizer is an opaque, non-water-soluble ointment that provides concentrated hydration and moisturizing protection to skin. It “melts” on contact, spreads easily and penetrates deeply into the skin cell layers. It is safe for use around the eyes.

Label uses	Use as a night-time moisturizer for all-night effectiveness. Use to promote healing after medical procedures, including microdermabrasion, chemical peels and laser treatments. It is also recommended for patients using medications such as tretinoin that may cause the skin to dry, peel and flake. EltaMD Moisturizer works well on minor to severe burns, including sunburn, and may be used to help relieve symptoms of eczema or atopic dermatitis.
Directions	EltaMD Moisturizer is very concentrated. For best results, apply daily to moistened skin. Use sparingly. Begin with an amount no larger than a pearl. With fingertips, apply a thin coat to the skin and allow it to penetrate the skin layers. After two minutes, gently pat-off excess.
Package size/dispenser	3.8 oz / 108 g Jar 2.8 oz / 79 g Tube
Applications per package	Varies by amount and size of area covered
Ingredients	Petrolatum, Paraffin, PVP Eicosene Copolymer
